vEXCHANGE®

by Vertican Technologies

Going “All In” for CMvX Receivers

What is All In? | How does it benefit us? | Is our data safe?

Did you know?

When you go ALL IN, you see data for ALL your clients in vExchange

. . . even if your clients do not use vExchange to send you the data.

All In with Analytics

Do you know which Senders earn you the most money?

Total Commissions by Senders

Interval Start: 2024-02-01 Interval End: 2024-08-31

Senders: Select All | Clear

Aggregate by: months

Search

Sender	Value	Percentages
603C	419,150.69	27.42%

What's Vertican's motivation?

We want to give you the best source of data ever. This is great for your business

. . . and ours.

Benefits of All In

Complete View

Get all the data, not just YGC data. You can even upload your paper claims. Historical data further completes the picture of your firm and how you compare to the industry.

Accurate View

When your data is partially online and partially offline, you don't see all data at the same point in time. Not to mention human error when dealing with spreadsheets.

Centralized View

All your staff see the same data in one place. CMvX translates all the claims so you don't have to. Centralized data means vExchange can show you that data in any form you want.

More Benefits of All In

Onboarding is Faster and More Cost Effective

If your firm is All In, turning on additional Senders is quick and easy. Without being All In, you must go through the full onboarding process for each new Sender. Professional Services are required.

Save on Your Dev

Building proprietary tools using applications like PowerBI or Tableau requires a large investment. If you go All In, you'll not only see all your data, but you can benchmark yourself against peers.

Future Industry Insights

If all Receivers were All In, vExchange Analytics could provide key data such as collectability by every zip code in the U.S. Vertican's goal for All In is to empower Receivers with the most comprehensive data source in the industry to boost your profitability even more.

Compliance, Security, Integrity

Vertican meets the demands of our clients for compliance, security, and data with integrity.

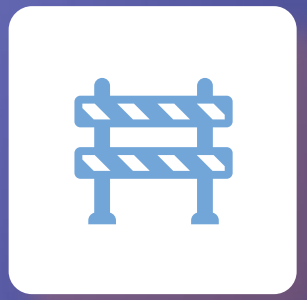
Compliance

Exclude PII when you upload data to vExchange. Vertican adheres to all industry standards and regulations, ensuring your data meets compliance requirements.

Security

Multi-layered protection with Azure SQL Database, including comprehensive firewall protection, secure FTP, and advanced endpoint security and threat management.

Data with Integrity



vExchange data pre-validation and validation, together with client-specific gates, prevents “bad” data from getting through and polluting your system of record.
